COUNTRY ESTATES / STRUCTURAL GLASS

Connect with light.

Frameless glass links for gyms, pool houses and estate outbuildings.

DISCOVER GLASS LINKS

Concept visualisation

THE ARCHITECTURAL IDEA

A transparent pause between old and new.

A structural glass link lets a country house and its outbuilding read as two distinct pieces of architecture - connected physically, yet separated visually by light.

01

Preserve character

A light-touch visual junction keeps original masonry legible.

02

Move in comfort

A sheltered, daylit route brings the estate into year-round use.

03

Frame the landscape

Transparent walls retain long garden and courtyard views.

Concept visualisation

PRIVATE GYM CONNECTION

Wellness, one light-filled walk away.

Turn a coach house, stable or barn into a private gym without making the route between buildings feel like an afterthought. The link becomes a calm transition - transparent by day, softly illuminated after dark.

EXPLORE THE POSSIBILITIES

IDEAL FOR

GYM + STUDIO

YOGA + RECOVERY

SAUNA + SPA

GUEST SUITE

POOL HOUSE CONNECTION

A pool pavilion that still belongs to the house.

A transparent link preserves separation between the main residence and a humid leisure environment while maintaining a seamless architectural journey.

Concept visualisation

DESIGN + PERFORMANCE

Quiet engineering. Precisely resolved.

Every link is engineered around the span, glass build-up, movement, interfaces and performance requirements of the project. The aim is simple: let the architecture lead, and make the structure recede.

01

Minimal connections

Glass-to-glass joints, corner glazing and roof transitions can be designed with no visible framework.

02

Thermal continuity

Thermally broken framing can be introduced where required and coordinated with insulated structural glazing.

03

Bespoke glass build-up

Single, double or triple glazing can be considered, with laminated panes used where required for structural safety.

04

Integrated access

Slim-framed or frameless doors can be coordinated into the link, with supporting structure concealed or carefully expressed.

PROJECT-LED PERFORMANCE

Low-E coatings, argon-filled cavities and double or triple glazing can support year-round comfort.

All specifications are project-specific and subject to engineering, building control and planning requirements.

A BESPOKE PALETTE

Made for the architecture.

The visual restraint of a glass link comes from careful choices behind the glass - selected for clarity, comfort, maintenance and the way the building will be used.

GLASS OPTIONS

Low-iron glass

Laminated safety glass

Double glazing

Triple glazing

Low-E coatings

Solar-control options

OPENING OPTIONS

Integrated frameless doors

External glass sliding doors

Opening panels

Motorised roof vents

Passive airflow

Coordinated access

DESIGN CONDITIONS

Listed buildings

Conservation settings

Irregular stonework

Different floor levels

Long rural views

Pool + wellness spaces

Final suitability and specification are determined through project-specific design and engineering.

THE GH APPROACH

From first sketch to a seamless connection.

- 01 Brief + context** Use, route, heritage sensitivity and planning context.
- 02 Concept + coordination** Proportion, opening strategy, levels and interfaces.
- 03 Engineering + specification** Details, glass build-up, movement and thermal performance.
- 04 Detail + delivery** Bespoke fabrication, installation and finishing on site.
